The original purpose of AutoCAD was to speed up the creation and modeling of computer-aided designs of mechanical parts and products. Unlike the original programs, AutoCAD is a comprehensive software program that includes a solid modeling tool that allows users to create geometrically accurate solid models, which are then used to produce vector-graphic drawings. As with many CAD programs, AutoCAD also includes a 2D vector-graphics application called DWG (Design Web Graphics) that enables users to create 2D drawings directly from the 3D solid model. It can also be used to view the drawing directly in 3D using a plug-in for Microsoft Windows and the Web. If you find it difficult to remember the basic commands of AutoCAD, you can study these lessons to quickly refresh your skills. Learning AutoCAD basics It is essential to get familiar with the software before you can work efficiently with it. Once you have practiced the basic command set, you will be able to achieve your goals as efficiently as possible. Understanding the drawing commands You will need to be familiar with the commands available in AutoCAD in order to create solid models, graphics, drawings, and documentation. These commands enable you to control the basic aspects of working in AutoCAD, including modeling, drawing, and other functions. In general, the commands can be grouped into four basic types: geometry, editing, plotting, and commands. Commands for geometry are the tools you use to create the geometry of objects. Examples of these commands include Commands for holding, creating, reshaping, and changing the properties of objects. Commands for editing are the tools you use to create the appearance and position of the objects. Examples of these commands include Commands for selecting, moving, aligning, arranging, deleting, duplicating, and redrawing objects. Commands for plotting are the tools you use to create graphics. Examples of these commands include Commands for creating images, creating text, and creating blocks. Commands for documentation are the tools you use to create documentation,

An updated study by the United Nations Food and Agriculture Organization (FAO), titled 'Food and nutrition analysis to support national nutrition surveillance and monitoring' (FNSM) has reported the number of water-borne disease cases in the division between 2000 and 2013 as a staggering 14.4 million. Unsurprisingly, Rangpur had the highest number of water-borne disease cases in the country in the past 13 years, a pattern seen for all the reported diseases. The study noted that the division had a high percentage of poor and marginalised people living in resource poor households. "The high occurrence of poor sanitation and the lack of safe drinking water in low-income families further exposed their health to a high risk of disease," the FAO said. Rangpur is home to 6.7 million people and yet the study found that in the division, almost 3.9 million (57 per cent) people suffer from chronic malnutrition. This is twice the national average of 23 per cent. "Poor household sanitation and water resources can lead to a poor diet and nutrient intake, and ultimately affect the health of people, especially children," said Debabrata Mahapatra, Director, FAO' a1d647c40b

(Spencer Platt/Getty) By:Richard Ma BBC News, London The hunting of foxes, badgers and hares has been banned for almost a century, but by the time that legislation became law in 2005, it had been in existence for barely 40 years. Now, the BBC has carried out a poll and found that the vast majority of the British public want to see fox hunting brought back. The findings appear to fly in the face of ministers' assurances that hunting is dead in this country, and they highlight the growing sense of alienation felt by traditionalists. Image caption More than 80% of the respondents said they wanted to see a return of hunting Some 15,000 people took part in the online survey by YouGov, a pollsters founded by Tom Harris, the former chief scientific adviser to the Conservative Party. The first thing that comes across is that those who took part were not representative of the whole country. They are men, and there is a strong social class bias. Only two thirds of the respondents are from London. The figures are skewed further by the fact that they are from a digital poll. Younger people are more likely to go online, and the sort of people who do are more likely to say they support hunting. The YouGov poll found that more than 80%
