EfMax is a complex program that allows you to monitor each computer on your local network from a single PC, and it provides a wide range of useful statistics about your employees. Straightforward deployment procedure Once the application has been installed on the administrator's machine, setting up the agent modules on every other PC on the network is a relatively simple task. EfMax provides you with a handy utility that scans your network and lets you know which computers are already running the agent application. You can then install it remotely, so it is not necessary to ever leave your desk. Monitor the efficiency of your employees EfMax calculates total

---

productivity by measuring the total amount of time spent working or performing other activities. Applications and websites need to be classified by the administrator, and they can be considered efficient, inefficient or neutral. The daily schedule is also taken into account, and the program lets you know which of your employees are the least punctual. Categorize activities and create multiple employee groups Every company is different, and applications that are essential to employee workflow in a certain field may be considered time wasters in another. To this end, EfMax allows you to determine which programs or websites fall in each category. It is also possible to create several groups and apply classifications only to a specific category of workers. Moreover, the daily and short-term reports created by the

---

application can be generated for individual groups, and the data can be exported to HTML documents and BMP or JPEG image files. In conclusion, EfMax is a comprehensive monitoring system that allows you to keep a close eye on all your employees' activities. It is relatively easy to configure and provides extensive statistics to help you track the overall efficiency of your workforce.

**EfMax License:** EfMax is a computer monitoring and control application.

**Languages Supported:** English System

**Requirements:** Microsoft Windows XP SP2, Windows Vista SP1 SP2, Windows Server 2008 SP2, Windows 7 SP1 SP2

Monitor, record and control computer activity EfMax is a complex program that allows you to monitor each computer on your local network from a single PC, and it provides a wide range

---

of useful statistics about your employees. Straightforward deployment procedure Once the application has been installed on the administrator's machine, setting up the agent modules on every other PC on the network is a relatively simple task. EfMax provides you with a handy utility that

#### What's New In EfMax?

EfMax is a comprehensive and convenient monitoring application that monitors all computers and applications running on the local network. Monitor all the applications that are running on your computer EfMax provides a full report on every application running on your system. The reports include the time they have been running, their activity and the percentage of time they

---

have been active. The information on all the applications, including Windows and Web-based software as well as drivers and games, can be accessed by simply clicking on a button in the application's main window. EfMax can also be configured to use certain tasks. For example, you can monitor the cumulative time spent on MSN by clicking on the button named "Time spent on MSN" and specifying whether the tasks need to be monitored at a selected frequency. The program will then count how much time you spend browsing the MSN website via the Internet, for example. Monitor the resources being used by all the monitored applications EfMax can tell you how much RAM, disk space, processor and any other resources they've used. You can also allocate

---

resources to applications and monitor their performance in real time. EfMax will display the maximum and minimum CPU usage values in a graph, and will let you know when a resource is nearing a critical point. Display performance data and application activity data in a graph

Get an idea of the activity of your computer by displaying the performance and activity data of your applications in real time. Graphs are used to represent the activity of the applications in time, and they can be configured to display CPU usage, RAM or hard disk usage, network transfer rate, Internet usage or Web page loading time. In addition, you can select the range of items to be displayed, and the current and maximum values. Graphs can be displayed as a list, and you can switch between them at any time. EfMax can monitor the activity of

---

each application regardless of which computer it is running on. It is simple to monitor the activity of applications that are running in the background and working in the background, such as games, utilities and background programs. Send real-time notifications to users about the performance and activity of applications EfMax displays notifications in the form of pop-up windows, so you don't have to wait for the information to appear on the screen itself. You can specify the frequency at which the notifications will be displayed, allowing for a flexible, intuitive approach to critical

---

## System Requirements:

No prior FGR experience is required. You will need to know how to use a mouse and keyboard. Each user must download and install the FGR files individually. You must have a microphone. If you have any problems running the FGR download, please submit a ticket at the Help Desk. While the first two titles were rather easy to manage, the third was a little more challenging. However, the new features make it more manageable and doable. Back when FGR 2.0 was released, I
