How Technical Analysis Works » Learn more - » As a technical analyst, you need to be familiar with how price and volume trends affect the price movement of a stock. It is the trend of the price that matters. This includes negative and positive trends. Trend Following Trading Strategies: » If the stock has started trending downwards, both short-term and long-term traders can join in. In technical analysis, the trend is always paramount. If the trend is still in force, a trader would keep on patiently waiting for the trend to reverse. If the trend is already in a downtrend, a trader will begin selling short after he has completed a weekly chart. He will also do the same in the case of an uptrend. The buy-and-sell price movement is much more significant in technical analysis than in fundamental analysis. Technical analysis does not use absolute values. It uses the difference between two prices or the distance between two points. It will also take the time taken to reach a price and the distance covered in that time. Technical analysis can be applied to the futures market and stocks. It is used to analyze the bond market in general and the foreign exchange market. Technical analysis should never be used by new traders. Technical analysts are the gold standard for technical analysis. Professionals with a long track record are the only ones that should ever use technical analysis. Technical analysis can be applied to all financial markets in general and the futures market in particular. To find a broker, visit our website www.FuturesDirect.com or use our broker finder.
