Structure of exosomal transferrin receptor-1: implications for iron uptake and immunity. Exosomes are secreted nanovesicles that mediate cell-cell communication. They carry proteins, mRNAs, and microRNAs, reflecting the state of the cell from which they originate. Recently, it was observed that exosomes could act as vehicles for transport of iron and other metal ions. In this issue of Immunity, several groups provide evidence that transferrin receptor-1, a multifunctional protein that has many immunological functions, is present on the surface of exosomes. This finding suggests that transferrin receptor-1-mediated iron transport via exosomes may play a role in the regulation of immune function.1. Field of the Invention The present invention relates to a picture management apparatus for collecting, storing and managing still pictures recorded on an electronic still picture camera and for judging the necessity of an exhibition or the like of the stored still pictures, and to a system for controlling the picture management apparatus. 2. Description of the Prior Art As the conventional picture management system, for example, there are systems disclosed in the U.S. Pat. No. 4,506,984 and 4,650,264. In the system described in the U.S. Pat. On the other hand, the system described in the U.S. Pat. No. 4,650,264, records in the same format as that in which the pictures are taken, into a picture storage device, the pictures which have been stored in the same format as that in which they are taken. Further, in the system described in the U.S. Pat. No. 4,506,984, in the event that the camera user desires to exhibit or reproduce the stored pictures before the pictures are stored in a proper format, since the pictures are stored in the proper format, the storing of the pictures in the proper format is controlled for the purpose of preventing the inconvenience from being caused to the camera user. However, in the system described in the U.S. Pat. No. 4,650,264, the system stores the pictures in the same format as that in which the pictures are taken into the picture storage device
