Graphic designers often use Photoshop as well to create their designs. See the "Designing with Photoshop" section in the next chapter for more information on using Photoshop to create a design. * * * # Picking the software that makes sense for you If you're a beginning computer user, you need to find a computer program that is intuitive and easy to use. Every computer comes with some standard programs, but you may want to buy others to enhance your computer's capabilities. In this section, I provide an overview of the free software programs that you can buy that you may want to consider when you add personal computers to your family. I discuss these software programs in order of their age (newer software is more advanced and more expensive than older software). If you're starting out in photography, you can find a good selection of photography programs — both free programs and programs that cost money. You also can find ready-to-use programs that produce good results as well as programs for creating custom images. See the "Understanding your equipment" section, earlier in this chapter, to find out about good photography programs. If you're starting out in graphic design, consider Adobe Photoshop Elements (E). It provides everything you need to create a beginning design, and as an added bonus, you get to share your work with friends and family! If you're interested in obtaining the full version of Adobe Photoshop, you can get a 30-day free trial. You also can get a free, 30-day trial of Adobe Acrobat by downloading a copy at `www.adobe.com`. * * * ## The Free Stuff When creating your first computer system, your first question probably should be: "Can I get a free version of the software that I want to use?" I offer you the following lists of free software programs that you can use right out of the box. Note that these lists are ordered in terms of the program's age: The most current edition, Adobe Photoshop CS5, is listed first, followed by older editions. (You can find software information in the introductions for each program.)

Note: This guide only provides information about the most common workflow in Photoshop. Please see the Photoshop Workflow Guide for a more detailed explanation of the workflow used in a professional environment. What is Photoshop Elements? Photoshop Elements is a popular program among photographers and photographers who want to take their hobby to the next level. It is a tool for Photoshop and also offers a series of creative tools that can be used to make Web or other content. Instead of a brush, a layer and a rectangular area, you can control the tool more flexibly. You can also customize it a lot more to make it fit your workflow. Photoshop Elements is an alternative to traditional Photoshop. It is not as powerful as Photoshop, but it can handle basic tasks a lot better. There are several other alternatives to Photoshop, so if you just want an alternative to the Photoshop you use for a hobby or personal website, there are a lot of other options. Is Photoshop Elements a good replacement for Photoshop? There are a lot of tools and features in Photoshop Elements that will be more than enough for the average hobbyist or casual photographer. The video editing feature is better than the one in Photoshop because the edits are much more smooth. It includes a color corrector that takes into account the color balance of the image. It also offers excellent noise reduction, which is missing in Photoshop. The layer and brush tools are surprisingly useful if you don't use those tools as often. There are also more effects than Photoshop has, in general, so the number of filters you can use is quite large. The built-in painting tool has a brush that can be customized. It is not as flexible as Photoshop's vector brush but you can use the painterly brush to create shapes and more detailed drawings. The most important feature of Photoshop Elements that makes it a good option is the capacity to use AI or machine learning. There are many image processing and analysis features in Photoshop

Elements, such as the tools that analyze the content of a photo. Photoshop Elements has built-in features for this and much more. It is faster than the advanced or professional tools. Although Photoshop Elements is not as powerful as Photoshop, it can speed up the editing process. The AI or machine learning helps with the analysis of the photo, which speeds up many other features. AI can also analyze the photo better than a human observer. How to use Photoshop 05a79cecff

Q: Projective Modules. Characteristic p I know that for a projective module M over a local ring k of characteristic p and m=rank M then 1) If p=char k=0 then M is free and we can take $M=k^n$. 2)If p=char k > 0 then M is not free and we can't chose one generator, because hom of any projective module is free. But now the statement seems to be true. Let k be a local ring of charaacteristic p>0 with a maximal ideal $\mathfrak{m}$, and let M be projective module and $M \ot = k^n$, then M is not free. Suppose there is some one element $f\in M$ which is not in the image of the endomorphism ring $End(M)$, then $M=\mathfrak{m}M$ and $M=0$ which contradicts to M projective. What are your comments on this, I can't find a counter example. A: Let k be a field of characteristic $p>0$ and let M be a finitely generated k-vector space with linear maps $\phi_i\colon M\to M$ such that the matrix $(\phi_i(m))_{i=0,\dotsc,p-1}$ has rank less than p. Now let L be a projective k-module. If M is a direct summand of L, then the rank of the matrix $(\phi_i(m))_{i=0,\dotsc,p-1}$ for the projection $M\to L$ is less than p, so the matrix is of the form $I_n+(\alpha_{ij})_{i,j=1,\dotsc,n}$ for $\alpha_{ij}\in L$, so M is the direct summand of L. If M is not a direct summand of L, then M contains no direct summand of L other than M itself, so M has rank less than p, so $(\phi_i(m))_{i=0,\dot

Q: Pass variable from js to onclick in html I want to have a variable that passes a value to my onclick function on html. This works fine: var s = Math.floor(Math.random()*100); document.getElementById('mybtn').onclick = function () { alert('Hello'+ s +'There'); } Click Me But if I change the code to: var s = Math.floor(Math.random()*100); document.getElementById('mybtn').onclick = s; Click Me I get a JS error: Uncaught ReferenceError: s is not defined I don't know why I can't use s in the onclick function. A: You're just using the wrong syntax. Put quotes around the assignment: var s = Math.floor(Math.random() * 100); document.getElementById('mybtn').onclick ='s'; Click Me Q: Proving $\lim_{n\to \infty}\frac{n^3}{5n+9}=\frac{1}{5}$ How to prove $\lim_{n\to \infty}\frac{n^3}{5n+9}=\frac{1}{5}$? I know that $\frac{n^3}{5n+9}=\frac{n
